Education

University of Calgary Expected Apr 2028
Bachelor of Science in Computer Science; Bachelor of Commerce in Finance *GPA: 3.94/4.0*

Experience

Software Engineering Intern May 2026 to Aug 2026
Ovintiv *Calgary, AB*

- Developed an R/Shiny forecasting platform for 400+ Permian wells, combining regression models, material pricing, and engineering assumptions to save **24 to 33 hours per month**, with engineer reviewed estimates of **$31K in net productivity gains over 24 months**.
- Designed a star schema database structure in **Oracle** to simplify forecasting data organization and improve query performance by **65ms/query**.
- Maintained **Azure DevOps CI/CD pipelines** and cloud applications; diagnosed dependency, authentication, API integration, and deployment issues across containerized environments.

Software Development Student May 2025 to Dec 2025
Ovintiv *Calgary, AB*

- Automated access provisioning across custom applications using Python, ServiceNow, Oracle, and Azure, **reducing provisioning time by 80%** and securing credentials with Azure Key Vault.
- Migrated legacy systems from **Oracle to Azure SQL** by refactoring SQL logic, updating application configurations, and testing changes before deployment.
- Implemented **permission logic and UI improvements** in Angular and .NET for a risk assessment application, managing versioning and deployments through Azure DevOps.

Projects

QuantArc | *Electron, React, TypeScript, FastAPI, Azure SQL* Aug 2026

- Built and packaged a Windows finance application using Electron, React, TypeScript, FastAPI, and Azure SQL; integrated **6+ APIs** for account aggregation, portfolio tracking, market data, and news sentiment.
- Structured the application using Model View Presenter architecture and provider adapters; implemented **asynchronous caching, request coalescing, rate limiting, and portfolio recovery** from backups.
- Secured account integrations with JWT authentication, Google Sign In, and **AES GCM encryption for Plaid tokens**.

MINDStream | *Python, PyQt5, BrainFlow, VisPy* Sept 2025

- Built a Python EEG/EMG desktop application using PyQt5 and BrainFlow for **live biosignal acquisition**, filtering, visualization, and CSV export for neuroscience experiments.
- Implemented multithreaded data collection, **GPU accelerated VisPy plots**, FFT/PSD analysis, and trial timers to support signal inspection and structured recording sessions.

Extracurriculars

Cofounder, Former President and Advisor Feb 2024 to Apr 2026
MIND Student Engineering Team *University of Calgary*

- Secured **$8,000+ in funding**, personally designed MINDStream, and led a 20+ member engineering team developing NeuroDrive, a brain controlled RC car, and a custom EEG acquisition board.

Vice President, Internal Apr 2026 to Present
Data Science and Machine Learning Club *University of Calgary*

- Raised **$10,500 in sponsorships**, oversaw development of a centralized club analytics hub, and delivered SciPy, NumPy, and data visualization workshops for **40+ students**.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Java, HTML, CSS, R, C, ARMv8 assembly
Frameworks and Libraries: React, FastAPI, Angular, .NET, Shiny, PyQt5, NumPy, SciPy, pandas
AI Tools: Cursor, Claude Code, Codex, Google AI Studio, ElevenLabs API
Tools and Data: Git, Azure DevOps, CI/CD, Azure SQL, Oracle, PostgreSQL, Azure Functions, Key Vault
Certification: Microsoft Certified: Azure Fundamentals, Anthropic Claude Code 101
